

## VALENT CABINETS

#### ROBUST DESIGN, LONG-LASTING PERFORMANCE

All Valent units are constructed of pre-painted 2-inch, double wall, injected foam cabinets (doors, panels, floor, and roof). This design provides a more efficient, long-lasting unit with high quality performance in challenging rooftop environments.

#### INCREASED EFFICIENCY

- 2-inch injected foam, double wall construction for doors, panels, floor, and roof keeps treated air in and untreated air out
- Valent's robust design increases structural integrity and the R-value of the cabinet, improving operating efficiency
- R13 injected foam panels are necessary in high outdoor air applications

#### HIGH PERFORMANCE PAINT INCREASES LONGEVITY

- Valent's cabinets are made from galvanneal steel that is pre-painted with a specially formulated paint
- Painted cabinets improve the longevity of HVAC equipment that is mounted outdoors with exposure to rain and snow
- Valent's pre-painted cabinet offers an exceptional 2,500 hour salt spray rating with an excellent post-salt spray testing condition rating

Pre-painted panels provide a consistent look and feel every time and are not dependent on the capability of an individual painter.

### MINIMAL UNINTENDED AIR TRANSFER

- Uninsulated or under insulated portions of a cabinet create undesirable temperature migration to the outside of the cabinet causing condensation
- Foam injected design reduces the chance of unwanted air transfer
