

ULTRA-QUIET CONDENSER FANS

STANDARD OFFERING FROM VALENT

All Valent condenser fans have serrated-edge blades, which cut through the air more quietly than standard paddle fan blades. Pairing this fan blade design with electronically commutated (EC) motors creates a more efficient, far quieter HVAC unit, especially at part load operation.

QUIETER OPERATION

- Serrated fan blades are, on average, 12 decibels quieter than standard paddle fan blades
- Valent condenser fans operate at low sound levels—making normal conversation possible even when fans are running at full speed

IMPROVED EFFICIENCY AT PART LOAD CONDITIONS

- Valent provides an EC motor on the lead condenser fan by default and offers EC motors for all fans as an option
- EC fans significantly improve performance at part load conditions with high turndown and low power consumption
